Subject: RE: Question about PFAS beta public tool

There may be a slight level of nuance between steps 1 and 2 (copying Andrew Schulman and Charles Tamulonis for their confirmation). I believe when a user registers for ECHO Gov, that we forward the approval request to NCC right away, but they normally do it at the end of the day. So when a user registers, that is always going to be a waiting period (not instantaneous). Also, another slight nuance is that if EPA employees are teleworking (not on EPA network), they will likely not be given access due to the fact that EPA users and non-EPA users are sent different places – and EPA's portal is only working if you are inside the firewall.

Andrew or Charles – please confirm.

That text is totally accurate.

Maybe break this into three obvious steps (people get confused)

- 1) Register
- 2) Log in to ECHO
- 3) Navigate to the National PFAS Data Explorer (beta) (this might change and they just use a url)
- 4) Log in to the secure Qlik platform

Subject: RE: Question about PFAS beta public tool

Here is the text I have for instructions for non-EPA users. It's not a great solution unfortunately...

Access Note: EPA users should have no trouble accessing the link. Non-EPA users that do not have an ECHO Gov account will first need to [register here](#). Non-EPA users with an ECHO Gov account that have used Qlik before should be able to access as well, but some users who are new to Qlik may have difficulty. If you receive an error when you open the link after logging into ECHO Gov, you should then wait until the next day and try to log in again. If you still have trouble, contact Jesse Yourish (Yourish.jesse@epa.gov) for assistance.

Access to the National PFAS Data Explorer prior to launch.

Getting [external](#) reviewers/users to register for ECHOgov and use the existing set-up for restricted viewing of Qlik tools should work fine. There is no risk of disclosure (but someone should test to confirm the firewall is working when the PFAS tool is put there). Also, OSM may need to update the ECHOgov access list daily during that time.

Overview of development schedule:

- ERG will deliver a beta version in the Qlik development area tomorrow (11/1). This version is frozen. ERG will continue development on the to-be-public version.
 - You might want to have staff in ORD, OECA, and other offices confirm they can access the tools once you receive the "hello world" email from Matthew.
 - We are expecting that there will be a few weeks of showing the site to management and program staff at EPA.

- After the beta is posted, we will be working on tickets that Amanda left behind, the data refreshes that will happen after NCCT finalizes the PFAS list, replacing text following Samantha and other' review, and some behind the scenes work that is needed. We also are assembling some decisions for EPA, which may result in additional changes to the Explorer.
- It would be wise to avoid publishing many iterations.
- When you are ready, we would request that OSM copy the latest version (more complete than beta) to EDAP and only allow access to external users who have been granted ECHOgov access.
 - If new signups to ECHOgov are expected as part of this process, OSM would likely need to increase the pace of enabling edap access based on ECHOgov users (it recently took more than two days for AKDEC user).
- Launch: As there may be further updates during this prerelease external review phase, we will expect to replace the edap version with the FINAL version at time of launch, OSM lifts the access restriction , and voila, it is public.

Subject: Question about PFAS beta public tool

I've been asked by Andy Gillespie whether the beta public version could be shared with other Federal partners (and presumably states) prior to launch. Andrew - Can you confirm for Jesse and I whether it is set up currently to allow ECHO Gov security level? If so, we will need to have some email with access instructions (presumably most of the testers are not currently ECHO Gov account holders). If the current set up would need modification to allow this security level, what amount of work would be needed to make this happen? And any risks or issues to note?
